## ANAFORM FIT

Anatomically correct ALIVE Composite upper and insole provide a more comfortable fit and more responsive skate. Through anatomical thermoforming, the skate is heated so it can be formed around the ankle and heel, giving a true 360 degree custom fit for any foot shape - and a real performance advantage on the ice.

## REFLEX TONGUE

State-of-the-art tongue design enhances custom fit like never before. ALIVE composite inserts let players customize the flex and performance of the tongue for multiple levels of personalization. ALIVE inserts act like a springboard: As you flex forward, the skate responds and lets you spring back. Customized fit for three levels of stiffness- Mid, Stiff, X-Stiff - and a SUPREME playing experience.

## TUUK LS FUSION RUNNER TECHNOLOGY

Revolutionary runner design that fuses the strength and performance of our elite stainless steel with high-grade aluminum, reducing the weight of the runner by 27% and delivering increased speed and power with every stride.

## TOTAL EDGE COMFORT

The Total Edge Comfort is designed to alleviate abrasion high on the ankle during the break-in process of a skate. The process, once only available as a custom option and utilized by many NHL athletes is now available to you on the SUPREME TOTALONE. The padded overlay adds to the SUPREME experience and provides players with a more comfortable performance product.
